

Home Energy Efficiency Auditor Course

This class equips students with the theoretical and practical tools needed to carry out and benefit from their own home energy audit. After surveying general principles of energy, students will progress systematically through all aspects of residential usage and conservation, including insulation, fenestration, HVAC and lighting, as well as health and safety issues. The classroom textbook is comprehensive and lab sessions allow hands on experience with the most important real-world situations. By course conclusion, students should be able to use their new skills to make energy-efficient and conservation-minded improvements on their own.
